KEY HIGHLIGHTS OF AZTECH'S EARNED VALUE (EV) AND AGILE MANIFESTO INTEGRATION

Four Core Values

Individuals and interactions over processes and tools
Working software over comprehensive documentation
Customer collaboration over contract negotiation
Responding to change over following a plan

Twelve Principles

Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.

Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.

Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.

Business people and developers must work together daily throughout the project.

Build projects around motivated individuals. Give them the environment and support they need and trust them to get the job done.

The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.

Continuous attention to technical excellence and good design enhances agility.

Simplicity--the art of maximizing the amount of work not done--is essential.

The best architectures, requirements, and designs emerge from self-organizing teams.

At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

Working software is the primary measure of progress.

Agile processes promote sustainable development.

The sponsors, developers, and users should be able to maintain a constant pace indefinitely.

Agile Sprint Planning: Implement short and frequent rolling wave planning.
Empowered Project Leads: Enhance authority and responsibilities of CAMs and IPTLs.
Flexible Quantifiable Data: Utilize flexible QBD for accurate progress measurement.
Streamlined Baseline Changes: Establish an efficient process for managing baseline changes.
Concise Progress Updates: Replace lengthy monthly EV reviews with punchy daily and weekly tag-ups
